

AWAKEN THE GIANT WITHIN

How to Take Immediate Control of Your Mental, Emotional, Physical and Financial Destiny!

BY TONY ROBBINS

The Big “So What”

We all have unlimited potential in us. **Through self-mastery, we can take control of our lives, to have and achieve anything we want in life.** This book is a detailed action guide to show how you can make fundamental and lasting changes to transform your quality of life.

Introduction

Everyone is born with talents and opportunities. This book aims to awaken us to our true potential. With deliberate focus, we can master and achieve anything.

In the book, Robbins acts as your personal coach, sharing his ideas, experiences, and distinctions, with examples, exercises, and tips to help you take action. **This summary distils the key ideas into 3 parts:**

- Raising your standards;
- Changing your limiting beliefs; and
- Changing your strategy.

Part 1: Raising your Standards

It Starts with a Decision

Your future doesn't depend on your circumstances; it depends on your decisions. Many people know what they must do to be successful, yet they don't do it. **If you don't decide how you'll live 10 years from now, you'd have, by default, decided to let circumstances dictate your life.**

Every successful person (e.g. Mahatma Ghandi, John F. Kennedy) had, at some point in their lives, made a major decision. For Robbins,

KEY QUOTES

“This book - and my entire life – is dedicated to producing a measurable increase in the quality of our lives.”

“The resources we need to turn our dreams into reality are within us, merely waiting for the day when we decide to wake up and claim our birthright.”

“Controlled focus is like a laser beam that can cut through anything that seems to be stopping you.”

“Changing an organization, a company, a country—or a world—begins with the simple step of changing yourself.”

“In life, lots of people know what to do, but few people actually do what they know.”

“True decisions are the catalyst for turning our dreams into reality.”

the turning point came 8 years before he wrote this book – he was fat, broke, and decided he had to change his life, and *never* be less than his best again.

- A true decision like this comes with such **complete commitment** that you cut off other alternatives, and persist until you somehow find the way to your goals. **The test of a real decision is consistent action.**
- Each failure is a **learning opportunity**; **the more decisions you make, the better and more confident you get.** Robbins improved his public speaking manifold through sheer practice - while others did 48 speaking events a year, he clocked the same number in just 2 weeks.
- **Make a long-term commitment to your decision, but stay flexible in your approach.** Act on the best available option, and keep your mind open to new options.

Opportunities are everywhere, but you can only harness them if you are taking action. Robbins' decision to do a seminar in Denver brought him to Becky, who later became his wife. His problems with a partner (which cost his company half a million dollars and a \$758,000 debt) helped him to build his company bigger and stronger.

Pain and Pleasure: The Forces that Drive Us

Everything we do is to avoid pain, or to gain pleasure. Thus, what we associate with pain and pleasure dictate our choices and our life.

- Even if we logically believe that something is good for us in the long term, we may not take action if we believe it'll bring us **short-term pain**. That's why it's hard to stick to a diet, or to quit smoking.
- We also fear potential loss much more than we desire potential gain, e.g. we'd be more motivated to avoid losing \$100,000 than to make an additional \$100,000.
- Still, **all of us have a pain threshold, where the level of pain is so high that we vow never to face it again.** The secret is to link massive pain to the behavior/ pattern that we want to avoid, so we'll stay away from it. As a kid, Robbins saw his dad drinking beer and wanted to try it. His mum agreed, on the condition he drank 6 packs at a go, the way his dad did. After forcing down 6 cans of beer and vomiting all over, Robbins never wanted to drink beer again.

KEY QUOTES

"Know that it's your decisions, and not your conditions, that determine your destiny."

"Repetition is the mother of skill."

*"The moment one definitely commits oneself, then Providence moves, too."
-Johann Wolfgang von Goethe*

*"Man is not the creature of circumstances; circumstances are the creatures of men."
-Benjamin Disraeli*

"If we associate enough pain to anything, we'll change."

The key is to learn to use pain and pleasure to drive our decisions and actions, rather than be controlled by them. We'll address this in Part 2.

Part 2: Changing your Limiting Beliefs

Understanding Belief Systems

Our beliefs shape our perception of reality, which shapes our life:

- Research shows that people literally start to transform their bodies (including diseases, personalities, and even appearance) the moment they believe they are a different person.
- For thousands of years, people believed it was impossible to run a mile in less than 4 minutes. Yet, once Roger Bannister broke this record in 1954, 37 other runners broke it in the same year.
- The book includes many other examples of how people with similar circumstances (e.g. dysfunctional family, crippling accident) can have totally different lives

Building & Changing our Beliefs

An idea is like a table-top - it can't stand on its own. It develops legs when we find references or experiences that support it. A belief is basically an idea that we feel very certain about.

The strength of a belief depends on (a) the number of references and (b) their level of emotional intensity.

- Opinions are built on a few references and are easily changed.
- Beliefs are built on more references, with strong emotional links. We feel so sure about them that we may be closed to new input.
- Convictions are obsessions that seem to vital our very existence. We feel intensely about them, get defensive if they're challenged, and are willing to take risks (e.g. failures, rejection) for them. Convictions can spur us to take massive and persistent action, but can also blind us to other views. For instance, zealots believe so deeply in their view of God, they're willing to kill to protect that belief.

KEY QUOTES

"We're not driven by the reality, but by our perception of reality."

"Things do not change; we change."

-Henry David Thoreau

"We can develop beliefs about anything if we just find enough legs - enough reference experiences - to build it up."

"If you question anything enough, eventually you'll begin to doubt it."

Beliefs are built on references, which are all the conscious and unconscious experiences we've accumulated. Our character and beliefs are often shaped by references from major events (e.g. near-deaths, huge victories). With more and higher-quality references, we get bigger perspectives and see more choices.

- We can expand our references in 3 ways, via (a) our own experiences, (b) external sources (e.g. role-models, books/ biographies, movies/ audios/ seminars), and/ or (c) our imagination (the brain can't differentiate between real and imaginary experiences).
- References are basically raw materials that we can organize and interpret any way we like. We can weaken beliefs by planting doubt (using new references or counter-examples), or we can strengthen beliefs (by finding more emotionally-intense references). The key is to consciously seek references that expand and empower us.

In short, it doesn't matter if a belief is "true", since humans can rationalize anything we wish to believe. In fact many of our existing beliefs are built on flawed information or assumptions that we didn't validate or scrutinize. What's more important is if the belief empowers us. Evaluate inputs independently, instead of relying on social proof or expert opinion. Study role models who've achieved your desired results, and model their empowering beliefs.

Neuro-Associative Conditioning™ (NAC)

When we do something, our brains create a neural-connection to the associated feeling or behaviour, whenever:

- There's something unique about the situation;
- The behaviour and sensation are happening simultaneously; and
- The association happens consistently.

The more we do it, the more we reinforce the connection. Eventually, it forms a "neural super-highway", and we continue to do / avoid the behaviour, even when the sensation stops.

KEY QUOTES

"Expand your references, and you'll immediately expand your life."

*"Imagination is more important than knowledge."
-Albert Einstein*

"Empowering beliefs - this sense of certainty - is the force behind any great success throughout history."

"Using social proof is a great way to limit your life—to make it just like everybody else's."

"Nothing in life has any meaning except the meaning you give it."

- ✗ Such links are **often flawed**. Our brain often assigns the wrong causes ("*false neuro-association*"). Or, it may feel confused when we link both pain and pleasure with something ("*mixed neuro-association*"), e.g. we want more money, yet don't want to be greedy - this weakens our resolve, and we sabotage our own goals.

The good news is, our habitual mental patterns can be changed quickly and permanently. The **NAC** is a 6-step system designed by Robbins to disrupt your disempowering patterns, and establish new, empowering ones that run without constant effort and willpower.

Define: what you want & what's stopping you from getting it.

Usually, we're unclear what we want, and we've linked more pain to changing than to maintaining the status quo. In Part 3, we'll address how to give clarity and power to your goals.

Leverage: Create a sense of urgency, by linking massive pain to not-changing, vs massive pleasure to changing.

- We must bring ourselves to the *pain threshold*, so we know with absolute certainty that we must change now. Remove any *mixed feelings* about a change, so our brain is singularly focused on the desired outcome.
- A man at Robbins' seminar wanted to fix his chocolate addiction, but was quietly proud of being a "chocolate champion". Tony made him agree to eat nothing but chocolate for 9 days. By the 3rd day, he couldn't bear to have more chocolate. He had shifted to his pain threshold, removed any mixed neuro-associations about quitting, and was now truly ready to make the change.
- To achieve lasting change, we need 3 core beliefs: (a) Things *must* change (not should or could, but must), (b) *I* must change it (full personal ownership); and (c) *I can* change it (confidence).

Disrupt: Break the old pattern by disrupting it.

- Do something totally *unexpected and different*, e.g. if you're overeating in a restaurant, jump up, point to your own seat and shout "WHAT A PIG!". After a few times, you will stop overeating as the humiliation is too painful.
- Interrupt the pattern, by *jumbling the memory beyond*

KEY QUOTES

"When you give your brain mixed messages, you're going to get mixed results."

"Change is usually not a question of capability; it's almost always a question of motivation."

"Some men see things as they are, and say, 'Why?' I dream of things that never were, and say, 'Why not?'"
-George Bernard Shaw

recognition. Play the negative memory in your mind like a movie. Then, replay it in fast-forward mode, scrambling and changing the components so it becomes a comedy, e.g. reverse the movie, give someone a pig's nose, add silly music... have fun and repeat until the old feelings no longer surface when you think of the situation.

Replace the old pattern with a new empowering alternative. This is crucial so you won't return to the old habits. Studies in drug rehabilitation found that, those who quit on their own and substituted drugs with relationships, career etc. stayed off drugs much more successfully than those without replacements.

Condition: Reinforce the new pattern until it is consistent.

- Give a reward (e.g. praise, gift, new freedom) with every small improvement (e.g. once you reject a snack, or stay away from cigarettes for a few hours). Give a negative reinforcement (e.g. frown, remove freedom) for every undesired behaviour. It's crucial to do this immediately, so you link the sensations of the reward or punishment to the pattern.
- You can also rehearse it repeatedly in your mind, with emotional intensity.
- Once a reward is linked to a certain behaviour, you can vary the reward to keep it effective.

Test the programming by imagining a situation which caused frustration in the past. If you've taken the steps correctly, you should now feel differently about it. If not, revisit steps 1 to 5 again. You can also use the "ecology checklist" in the book to identify potential gaps, and model someone who has achieved what you desire.

KEY QUOTES

"Any pattern of emotion or behaviour that is continually reinforced will become an automatic and conditioned response. Anything we fail to reinforce will eventually dissipate."

"The way to expand our lives is to model the lives of those people who are already succeeding."

"Often people die emotional and spiritual deaths long before they ever leave their physical bodies."

Part 3: Changing your Strategies

If you've made a firm decision and are ready to change your limiting beliefs, we can now look at the specific strategies and action steps you can take.

Getting What We Really Want

Everything we've ever wanted in life (e.g. goals about money, family, career) is to allow us to *feel what we want to feel* (e.g. loved, respected, happy etc.)

The Power of State

Our **emotional states** are our internal (typically unconscious) reaction to what's happening around us. They determine how we feel, and how we act. The same person can behave very differently when he's in a "blur" state versus an "alert" state. It's like a TV being tuned to different channels.

You can **change your emotional states** in 2 ways:

Changing your Physiology: How you use your body affects your feelings. Frowning and dropping your shoulders can make you feel tired, while sitting upright, breathing deeply and smiling can make you feel refreshed. For example, musician and songwriter, John Denver, found that he was most inspired after adrenaline-pumping activities in nature, like skiing or flying his jet.

- Expand your range of experiences, by expanding your range of emotions.
- Besides "common" emotions like happy or sad, explore what it's like to feel fascinated, sensual, enchanted, bold, gentle...
- Strengthen your neuropaths for laughter and happiness. Try laughing for no reason, grinning in front of the mirror, or even going for a skip instead of a jog!

Changing your Focus: You can change how you feel by shifting what you focus on, and how you focus.

- What you focus on: Our perception works like camera lenses. We can zoom in to make something look bigger than reality, minimize it, or blur it. If you focus on something bad long enough, you'll feel bad; it's the opposite if you focus on something good. Hence, **focus on solutions and where you want to go, and ask good questions** (e.g. "how can I turn this around?") to focus your brain. We'll expand on this later in the summary.

KEY QUOTES

"Stagnation comes from lack of movement."

"Just by changing our physiology, we can change our level of performance."

"Drivers know that you go where you look; you travel in the direction of your focus."

*"Ask and you will receive. Seek and you will find; knock, and it will be opened to you."
-Matthew 7:7*

- How you focus: We all have our primary experiential modes- *visual* (e.g. colour, brightness, size, distance, movement), *audio* (e.g. volume, pitch, tone, tempo) or *sensory* (e.g. texture, feelings, smells). **Identify the experiential modes and sub-modals that bring you most intense emotions** (e.g. if you are primarily visual, are you most moved by colour or movement?).

Use these modes to focus on something with intense emotions, or push something undesirable into the background. In the book, Robbins explains this in detail, with exercises to help you identify and craft your experiences.

Combine the ideas above to **list down at least 15 empowering things that you can do to feel good instantly** (e.g. swimming, hugging your kids, having a hot bath). Use this to do things that build positive neuro pathways, and avoid destructive sources of pleasure (e.g. drugs).

The Power of Questions

Successful people ask better quality questions that empower and lead them to good answers. Questions can:

- **Instantly shift your focus and feelings**: Instead of asking “why am I so upset?”, ask “how can I find joy at the moment?”. Instead of affirmations like “I’m happy”, ask questions like “what can I be happy about now?” When disaster strikes, **rather than ask questions like, “why me?”**, ask “how can I use this?” and “what do I still have?”.
- **Help us to prioritize**: **Our minds only focus on a few things, and delete what’s unimportant**. If you focus on what’s making you upset, you naturally shut out what’s making you happy. If someone asks you, “how would you feel about losing the game?”, your brain starts to focus on the possibility of losing. **Answering the wrong questions can weaken your empowering beliefs and create new ones**.
- **Uncover resources and solutions**: When you ask questions like “how can I get 10x better results?” **your mind seeks out new options you may not otherwise consider**. The answers may not come instantly; keep asking the questions with faith until the answers surface.

KEY QUOTES

“As the fletcher whittles and makes straight his arrows, so the master directs his straying thoughts.”

-Buddha

“If we want to change the quality of our lives, we should change our habitual questions.... (they) direct our focus, and therefore how we think and how we feel.”

“The question is not whether you’re going to have problems, but how you’re going to deal with them when they come up.”

“It’s not only the questions you ask, but the questions you fail to ask, that shape your destiny.”

“The important thing is not to stop questioning. Curiosity has its own reason for existing.”
- Albert Einstein

Learn to ask great questions as part of your success habits. The book also includes a list of problem solving questions, and “power questions” to focus your mind every morning and evening.

The Power of Vocabulary and Metaphors

Language is a crucial part of culture, and it shapes how we perceive, think, feel, and act.

 **Words:** Help our minds to interpret/ translate our experiences, and have an instant biochemical effect on our state, e.g. you’d react differently if you were called an “idiot” vs an “angel”. Just by changing the labels you put on your emotions, you can change how you feel. Robbins terms this “**Transformational Vocabulary**”.

- You can reduce the emotional intensity of **negative feelings using words**. Try asking yourself, “am I furious, or just feeling a bit annoyed”? Instead of saying “I’m depressed”, try “I’m feeling a little down”, or “I’m recovering from a slight bump”. You can also use fun/ novel words to break your pattern, e.g. “oh, poops” may make you laugh and snap out of your anger.
- You can heighten **positive sensations** with words like: unstoppable, amazing, outrageous, smashing, dynamite (vs words like okay, good, alright, cool).
- Words can also soften your **approach with others**. Instead of saying, “This is really screwed up, we must fix it”, you can say, “I’m a little concerned about this, can we talk about it?”
- In the book, Robbins provides a range of vocab you can use. The goal is not to deny your negative feelings, but to be able to consciously reduce pain and increase pleasure in your life.

Metaphors: are very powerful because they bring up strong emotions, imagery and associated frames/ rules.

- A simple **shift in metaphor** changes your perceptions and associated frames/ rules. For example, “life is an ongoing battle” brings up different frames of reference compared to “life is a game” or “life is sacred”. Choose empowering metaphors e.g. “climbing the success ladder” instead of “trudging through the battlefield.” If someone says “I’ve hit a brick wall”, you can suggest they drill through it, or open a door and walk through.

KEY QUOTES

“Words form the thread on which we string our experiences.”
- Aldous Huxley

“Words shape our beliefs and impact our actions.”

“Words are the fabric from which all questions are cut.”

“Words can injure our egos or inflame our hearts.”

“We’ve got to be precise in the words we use because they carry meaning not only to ourselves about our own experience, but also to others.”

“Take control of your metaphors now and create a new world for yourself: a world of possibility, of richness, of wonder, and of joy.”

- Some metaphors may be appropriate in one context but not another. Be careful of the limiting beliefs that can come with a metaphor, e.g. a pond brings to mind different associations from an ocean. Your choice of labels or metaphors can also shape your relationships, e.g. calling your spouse “the old man” vs “my lover” or “life-partner”.

Emotional Mastery

In our garden of life, weeds (like negative emotions) will always appear. We shouldn't ignore them, nor get upset over them. **Simply remove the weeds and plant your positive emotions daily so your garden will be healthy and vibrant.**

Our emotions are our internal compass – they tell us if we need to change our course. You can **use the NAC to master your negative emotions in 6 steps:**

Identify the feeling and use transformational vocab to reduce the intensity, e.g. “Am I feeling betrayed, or just a little hurt?”

Accept your emotions as a call-to-action; don't avoid or fight them.

Shift your emotional state to curiosity. Consider the message behind the feeling, and shift to solutions mode.

Focus on turning things around. Model past successes and build confidence to break your current state.

List 3-4 options to handle similar situations in future. Rehearse them mentally to build your neuro-pathway and confidence.

Take action, giving yourself time to get used to these 6 steps.

The book details **10 “action signals”** or negative emotions, and their **underlying messages** (discomfort, fear, hurt, anger, frustration, disappointment, guilt, inadequacy, overwhelm, loneliness), **as well as 10 “emotions of power”** or positive emotions (love & warmth, appreciation & gratitude, curiosity, excitement & passion, determination, flexibility, confidence, cheerfulness, vitality, contribution).

- **Most of the 10 emotions of power are antidotes to the 10 action signals** e.g. gratitude can overcome fear, curiosity can shift the sense of hurt, anger can be redirected into excitement and passion, etc.

KEY QUOTES

“You don’t need any special reason to feel good—you can just decide to feel good right now, simply because you’re alive, simply because you want to.”

“Cultivate curiosity, and life becomes an unending study of joy.”

“If you could only love enough, you could be the most powerful person in the world.”
- Emmet Fox

“The consistent expression of love seems to be able to melt almost any negative emotions it comes in contact with.”

- As you practice the 6 steps of emotional mastery, learn to recognize the various emotions and discover their underlying meaning for you.
- Always tackle negative emotions early, before they build up.

Defining your Goals

Often, people don't set goals for fear of failure. Yet, it's vital to have a crystal-clear focus that you commit to. In the book, **Robbins walks you through a detailed goal-setting exercise in 4 areas:** (a) Personal Growth, (b) Career/ Business/ Financial, (c) Things to Own/ Do, and (d) Contribution.

- For each area, **brainstorm** a list of every goal you'd want to achieve. Add a **timeline** to each item (don't worry how you'll achieve it yet).
- Decide on your **top 1-year goal** for each of the 4 areas. Get clear on your **"why"**, by writing down why each goal is vital and why you're committed to it.
- Over the next 10 days, build **momentum and emotional links**:
 - o Break down the top 4 goals into **small daily actions**, and do them.
 - o Twice a day (morning and night), **rehearse** how it feels like to achieve your top 4 goals.
- Surround yourself with **role models** and people who can help to bring your goals to life. **Review** your list regularly to ensure you're still committed to them.

Unleashing your Inner Giant

Your goals are a means to an end, a tool to direct your focus and growth. **The ultimate goal is to unleash your potential – who you become, and the people you touch along the way.** With clarity on your goals, you can now answer this question: "To achieve all that I want, what kind of person must I become?"cross-cultural.

Your Hierarchy of Values: Our life values shape our decisions. **Since many of us don't know who we want to be, or what our values are, we can't make the "right" decisions, and this brings us pain.**

KEY QUOTES

"My philosophy is, 'Kill the monster while it's little.'"

"There's nothing quite so compelling as a feeling of sincere contribution."

"Remember that goals are dreams with a deadline."

"Achieving goals by themselves will never make us happy in the long term; it's who you become, as you overcome the obstacles necessary to achieve your goals, that can give you the deepest and most long lasting sense of fulfillment."

- We all have pleasurable emotions that we gravitate towards (e.g. love, success, freedom) and those that we avoid at all costs (e.g. rejection, loneliness, failure). Sometimes, our values conflict with one another, e.g. if you value both freedom and security almost equally, you may feel torn between the two. Or, someone who seeks success but fears rejection will find it hard to move ahead.
- Our current values are shaped by many external influences – e.g. parents, teachers, friends, colleagues – they don't usually represent who we really are, or can be. **The key is to (a) know your current values and (b) set them up so they're "aligned" with your top goals and who you want to be.**
- In the book, Robbins takes you through several exercises to identify your current values, potential sources of conflict, and to **recreate a prioritized list of values that are aligned with your desired destiny**. Some questions to consider are: "To achieve my desired destiny, what set of values must I live by?", "What would it cost me if this value was at the top of my list?"

Remember: your past is not your future, and you are free to choose values that support you.

Changing the Rules: We have many spoken and unspoken rules that we use to evaluate people and things around us, e.g. what's a good boss, lover, parent...

- When your rules are distorted or conflicting, you feel like a perpetual loser no matter what you accomplish. If "love" is your top value, and one of your rules is "If you get too close to someone, you'll get hurt", you're setting yourself up for pain.
- Each time you're upset with someone (including yourself), it's because your rule(s) or expectations have been violated. **Since rules are set by you, you are free to re-create them.** Relook at your "must" rules (those you abide by strictly) to see if they should be relaxed or removed. **Set empowering rules** that move you in your desired direction, and fulfil 3 criteria: (a) achievable, (b) within your control and (c) make it easier for you to feel good than bad.

KEY QUOTES

Every decision is guided by (our) values, and in most cases, we didn't set them up."

"We are not our values. We are much more than our values."

"How can you ever hope to win a game if you don't even know the rules?"

Identity: We act consistently with who we think we are (even

if it's inaccurate). If you keep failing to make a change, it's probably due to a clash with an underlying identity belief (e.g. "I'm conservative", "I've got fat genes"). **We're free to evolve and shape our own identity**, and Robbins shares several exercises to help you do so. Here's an example:

- When you are in a calm and resourceful state, ask yourself, "Who am I?". Write down whatever comes up, and keep adding on to your list, until you feel certain about the description.
- List down all components of this identity (e.g. how you look, walk, think). Identify the role models who have these characteristics, and keep expanding your list in detail. Create an action plan, including a list of people you should/ should not associate.
- Commit to your new identity – share it with everyone, and use the new label to describe yourself daily.

Taking Control of the Master System

Successful people stand out in their field because they've gotten enough distinctions to make great evaluations (e.g. Warren Buffett and Peter Lynch in investments). **The effectiveness of your evaluations hinge on 5 key building blocks:**

- **Your mental /emotional state:** Make vital decisions only when you are in a resourceful state (rather than negative state).
- **Your habitual questions:** Ask the right questions to shape your focus and results.
- **Your hierarchy of values:** Choose your values carefully, aligning them with your highest goals and who you want to become.
- **Your beliefs:** Build empowering beliefs and convictions that energize you to take consistent action.
- **Your references:** Gather new references to expand your views. Organize and interpret them in ways that empower you.

KEY QUOTES

"We can't control the wind or the rain or the other vagaries of weather, but we can tack our sails in a way that allows us to shape the direction of our lives."

"When we focus consistently on improvement in any area, we develop unique distinctions on how to make that area better."

"It's not what we do once in a while that shapes our lives, but what we do consistently."

Changes to any of these 5 building blocks can change your life, and we've covered many tools to help you do so. Take action!

The 10-Day Mental Challenge

For the next 10 consecutive days, focus *all your energy on possible solutions, not problems*. Commit not to dwell on any unsupportive thoughts or emotions. Whenever negative thoughts emerge, *catch yourself quickly* within 2mins and use the techniques you've learned to *shift to a better state* (e.g. ask good questions, change your vocab/ metaphors). If you slip up, just make a shift asap. Use this challenge to become aware of your mental patterns, train your mind to find empowering options, boost your confidence, and build new habits, standards and expectations.

Other Details in the Book to Look out For

This book is packed with more than 500 pages of insights, examples, tips, exercises and distinctions, such as:

- Many of Robbins' personal references and examples, as well as famous personalities like Donald Trump, Mother Theresa, Bill Gates, Mahatma Ghandi, Walt Disney, Warren Buffet, and Soichiro Honda;
- References to real-life economic/ social issues and scientific research; and
- A complete 7-Day success program to integrate all the components.

Robbins reinforces the ideas using different perspectives, details and analogies, all of help to bring the "aha" moment, and to inspire us to action. To get the most from the book, you'll need to examine the details, and take consistent action. Do get a copy of the book, or download the recent gift edition "[Re-awaken the Giant Within](#)".

KEY QUOTES

"Success is processional. It's the result of a series of small disciplines that lead us into habitual patterns of success that no longer require consistent will or effort."

"The mark of a champion is consistency - and true consistency is established by our habits."

"I wrote this book to be an action guide—a textbook for increasing the quality of your life and the amount of enjoyment that you can pull from it."

"The capability for greatness in anything is within you even now."
